Subject: Information Request

06/06/02 11:31 AM

Good Afternoon.

I have a few questions regarding the FMC Corp. Site in Pocatello, Idaho and I was hoping you'd be able to provide some answers or point me in the right direction.

1) Is FMC the potentially responsible party and is there a person there I may contact regarding remediation? **The Eastern Michaud Flats (EMF) site was listed on the Superfund NPL in 1990. The EMF site consists of Simplot and FMC. FMC is also a regulated RCRA facility. They managed hazardous waste and have several units that will require RCRA post closure permits for. The off-site area both facilities have contaminated both facilities are responsible for addressing.**

2) When do you anticipate beginning the clean-up of this site? Has a plan been drafted or approved yet?

One Record of Decision (ROD) was signed for the EMF site in 1998.

Implementation of the ROD is done through a Consent Decree. There are a number of outstanding issues on FMC's work identified in the ROD so EPA decided to do a Consent Decree for Simplot, one for FMC and one for the off-plant area. The Simplot Consent Decree was signed on May 9, 2002 and they are proceeding with conducting the necessary remedy. FMC's ROD will require modification, a schedule has not been developed for that work yet. FMC may have to do additional site investigation since the operating areas of the facility were not characterized under Superfund. A schedule has not been developed for this yet. A schedule has not yet been developed for the off-site ROD yet either.

3) What is the extent of contamination?

The extent of contamination is detailed in the Superfund Remedial Investigation/Feasibility Study (numerous volumes and appendices). This report is available at the ISU library.

Thank you in advance for your direction. I look forward to hearing back from you.

Best Regards,

USEPA SF
